

PureGym Support Hub

Internal Support Platform for PureGym Arabia Agents — KSA & UAE

Overview

PureGym Support Hub is a private web application used by the PureGym Arabia Member Services team. It brings ready-to-send scripts, a PureGym-smart AI assistant, live promotional offers, and calculation tools into one fast, bilingual (Arabic/English) workspace covering both Saudi Arabia and the UAE.

Purpose & Goal

Help support agents reply to members quickly, accurately, and consistently — regardless of country, language, or how often policies and offers change. The hub removes guesswork and searching, so every agent sends the same correct, on-brand message.

What It Contains

- **Script Library** — 542 ready scripts across 13 categories, with instant search, favorites, and Active/Inactive filters.
- **AI Assistant** — a PureGym expert that answers in Arabic or English for KSA/UAE, understands screenshots, and drafts ready-to-send replies (grounded in the real script library — it never invents prices or policies).
- **Live Offers** — the current promo codes are pulled automatically every day from the official PureGym KSA & UAE websites, in both languages.
- **Quick Scripts** — shared one-click-to-copy conversation shortcuts (managed by admins) with a Male/Female toggle and per-user favorites.
- **Calculation Tool** — membership/plan calculations rebuilt from the official workbook.
- **Admin Editor** — manage scripts, categories (add / rename / delete), users, and the AI knowledge base.

Technology

- **Next.js 14 + React + TypeScript** — modern web framework (front-end and back-end together).
- **Prisma + Neon PostgreSQL** — managed cloud database and the single source of truth.
- **OpenAI API** — powers the AI assistant and proofreading.
- **Vercel** — hosting with automatic deployment on every code push.
- **Gmail SMTP** — email verification and password reset.

Security & Reliability

- Signed session cookies, email verification, and password reset.
- Rate limiting on login, sign-up, and the AI to prevent abuse and runaway cost.
- User / Admin / Super Admin roles.
- Every script is mirrored to a project backup file, so admin-added scripts are never lost.

Roadmap — Planned Development

- **Browser Extension** — a PureGym Support Hub extension that runs the hub's scripts and shortcuts directly inside any browser tab. A faster, in-house replacement for TextBlaze that stays automatically in sync with the hub.

Estimated Monthly Running Cost (25 Daily Users)

Approximate cost (USD/month) for about 25 agents using scripts, the AI assistant, and tools every day. The main variable is real AI usage; figures assume roughly 8 AI messages per agent per day (~6,000/month).

Component	Budget	Recommended	Premium
AI model	GPT-4o-mini	GPT-4.1-mini	GPT-4.1
OpenAI usage (AI + proofread)	~\$15	~\$40–55	~\$210
Hosting — Vercel	Free / Hobby	Pro — \$20	Pro — \$20
Database — Neon PostgreSQL	Free	Launch — \$19	Launch — \$19
Email — Gmail SMTP	Free	Free	Free
Estimated total / month	~\$15–25	~\$80–95	~\$250

Notes: The Recommended tier balances answer quality and cost and is the suggested setup for 25 users with no lag. OpenAI prompt caching can reduce the AI cost further since the knowledge base is stable. Vercel and Neon paid plans are recommended to avoid cold-start delays and to keep the daily auto-updates reliable. Prices are indicative and may change with provider pricing and actual usage.

Cheaper / near-free AI option: instead of OpenAI, the assistant can run on **Google Gemini Flash** or **Groq (Llama)** — both offer generous free tiers that can bring the AI cost close to \$0 at this scale. The app uses a single AI function, so switching providers is straightforward. (OpenAI GPT-4o-mini / 4.1-nano is the cheapest in-house OpenAI option.)
